

# Easy Line

## Custom Made Automatic Filling Lines

### Easy Line

The **KULP EASY LINE** is a solid and robust automatic packaging line consisting of filling, capping and labeling systems for companies that need a line capacity of up to 1200 containers/hour.

You can design your own packaging line, depending on the specific needs of your product. Thus, you will not have to pay for any extra equipment you are not going to use. All you need is to specify the technical specifications in each section of the line.
