Semi-Automatic L-Sealers

L-Sealer KL4055

The **OnShrink KL** semi-automatic L-sealers for Shrink Lines by Kapelis Packaging are of high quality and very affordable. Compatible with the **OnShrink KT** series shrink tunnels.

They are intended for applications where flexibility is required in the degree of automation of production.

The operator manually places the product in the cutting/sealing area. The L-sealer's function is triggered either manually (by pressing the corresponding button or foot pedal - optionally) or automatically (with set waiting and sealing times). Subsequently, the product is transferred to the shrink chamber through the integrated conveyor.

The machine is electronically controlled by a PLC.

They are always offered in a motorized version (without the need to buy a compressor).

General Features:

- Protection of the operator: the cutter returns to its position when it encounters an obstacle (e.g., the operator's hand).
- Adjustable time & sealing temperature.
- Conveyor belt in the sealing area.
- Roller conveyor with silicone-coated rollers inside the chamber.
- Adjustable height.
- Very easy switch between different products.
- Stainless steel resistors.
- Compliance with EC regulations of the European Union.

Optional:

- Automatic film trim collector.
