- **Vents where you decide**

www.sirane.com

Sira-Cook™ Sira-Vent™ allows food to be heat-sealed in a bag which can be simply oven-cooked or microwaved straight from chilled or frozen in the food's original pack. A central vent opens during cooking, allowing the steam to escape but ensuring all sauces stay within the pack.

Consumer friendly packaging, where food handling is kept to a minimum, no need to transfer from pack to tray; it's the uncomplicated way to cook or simply heat-up meat, fish and vegetables. The food can be simply steam cooked in the pack, enhancing the food's natural fresh flavour.

Steam cooking is the healthy way to cook. All the flavours and goodness of the food is retained in the bag, along with the juices, and simple sauces and marinades can be added to seafood, poultry and vegetables to make a taste sensation.

Sira-Cook™ Sira-Vent™ allows you to control exactly where the bag vents. It is designed for microwave use - although it can also be cooked in the oven, where controlling the vent can be useful to stop any juices escaping during the cooking process.

Sira-Cook™ Sira-Vent™ is now available on the reel.

Sira-Cook™ Sira-Vent™ is not formulated with BPA.

Crystalline polyester material suitable for both oven & microwave

Bag is heat-sealed with food inside, so is odour and leak-proof

Vent can be controlled and can be hidden or become a feature of the bag

Suitable for temperatures up to 200°C

Direct to oven/ microwave from freezer or fridge

Many colours & bespoke sizes
