

Sira-Flex™ Resolve®

Films, bags & pallet liners for shelf-life extension

- **Real and significant shelf-life extension for all fruit & vegetables**
- **Breathable, natural material**
- **100% compostable & sustainable**
- **Available as films including reels for flow-wrap, bags and liners for bulk transportation**
- **Retail packs available**

Sira-Flex™ Resolve® bags and films offer significant shelf life extension for fresh fruit and vegetables, including fresh salads.

These unique bags, films and liners optimise the atmospheric conditions inside the pack/pallet to prolong freshness and enhance the quality, taste and texture of the food.

Sira-Flex™ Resolve® is a new film which has been developed to have the optimum balance between humidity control and O₂ and CO₂ permeability. It does not rely on holes, the permeability is controlled by the property of the film itself.

Due to the unique structure of **Sira-Flex™ Resolve®**, the permeability to humidity, O₂ and CO₂ is different in each case. This has allowed us to balance the permeability of each component to achieve the optimum result.

The permeability is self-regulated according to the temperature so that the optimum atmosphere is maintained inside the pack even if the storage temperature is variable. The results are remarkable. There is no condensation on the inside of the film and the product does not dry out.

Sira-Flex™ Resolve® is not plastic. It is a natural bio-polymer made from plants. **Sira-Flex™ Resolve®** is breathable, sustainable and fully compostable.

Significant shelf-life extension

Breathable film

Compostable and sustainable

No fogging due to unique control of pack moisture

Available in various thicknesses, plain or printed

Films, bags and larger liners

Reels available for flow-wrap
