## Metal Detectors METAL SHARK GF for granular products and powders in bulk form

The METAL SHARK GF (Gravity Feed) is used for pipelines with free-falling products to detect metal contamination in continuously flowing granulates or powders.

The sensitive sensors detect the smallest metal contaminants, and fast-switching separation flaps discharge them directly from the product stream during ongoing production.

### General Features:

- 100% made of stainless steel – sturdy construction and easy to clean
- Fixed or floor-standing wheeled machine version, with adjustable height and an easy dismantling procedure
- Stable detection performance even with changes in product composition or temperature.
- Maintenance-free through automatic balance and calibration control
- Special sensor head version with the ability to operate on multiple alternative frequencies.
- Storage capacity for up to 250 different programs
- ATEX-version for use in explosion endangered environments
